## TOPIC 12-1

Topic Essential Question:
How can you find the probability of events and combinations of events?

## Target Essential Question:

How does describing events as mutually exclusive or independent affect how you find probabilities?

## TARGET: <br> I can use relationships among events to find probabilities.

## topic 12-2 <br> Probabil lity

Topic Essential Question:
How can you find the probability of events and combinations of events?

## Target Essential Question:

How are conditional probability and independence related in realworld experiments?

## TARGET: <br> I can find the probability of an event given that another event has occurred.

## topic 12-3 <br> Probability

Topic Essential Question:
How can you find the probability of events and combinations of events?

## Target Essential Question:

How are permutations and combinations useful when finding probabilities?

## TARGET: <br> I can use permutations and combinations to find the number of outcomes in a probability experiment.

## topic 12-3 <br> Probabil lity

Topic Essential Question:
How can you find the probability of events and combinations of events?

## Target Essential Question:

What does a probability distribution tell you about an experiment?

## TARGET: <br> I can define probability distributions to represent experiments and solve problems.

## TOPIC 12-5 <br> Probability

Topic Essential Question:
How can you find the probability of events and combinations of events?

## Target Essential Question:

What does expected value tell you about situations involving probability?

## TARGET: <br> I can calculate, interpret, and apply expected value.

## TOPIC 12-6 <br> Probability

Topic Essential Question:
How can you find the probability of events and combinations of events?

## Target Essential Question:

How can you use probability to make decisions?

## TARGET: <br> I can use probability to make decisions.
