Language & Literacy

Getting Started with Success

This session builds a solid understanding of both the teacher and student experience and key steps to take in the first few months to get started with success with Imagine Language & Literacy. Participants will learn how to manage student settings and dive into the powerful personalized learning and adaptive instruction for students. Action plans will be laid out with key data points and reports for teachers to monitor to ensure students are engaged and motivated to learn. Hands-on planning to support use in a variety of implementation models including hybrid, remote and in-person learning, will be mapped out.

Using Data to Inform Instruction

This session delves into how to use data to plan for and drive instruction and student achievement. Educators will build upon their knowledge of Imagine Language & Literacy reports and get hands-on to analyze student data in the Portfolio, Progress by Lesson, and the Action Areas Tool and map out action plans to inform instruction.

Math

Getting Started with Success

This session builds a solid understanding of both the teacher and student experience and key steps to take in the first few months to get started with success with Imagine Math. Participants will learn how to manage student settings and dive into the powerful adaptive content, the benchmark assessment system using the Quantile® framework, quality math instruction, STEM extensions, actionable reports, and even live teachers for grades 3+. Action plans will be laid out with key data points and reports for teachers to monitor to ensure students are engaged and motivated to learn. Hands-on planning to support use in a variety of implementation models including hybrid, remote and in-person learning, will be mapped out.

Using Data to Inform Instruction

This session delves into how to use data to plan for and drive instruction and student achievement. Educators will build upon their knowledge of Imagine Math reports and get hands-on instruction on analyzing student data and guiding whole- and small-group instruction. For grades 3+, participants will examine reports to monitor student progress through pathways and create custom pathways.

Reading

Getting Started with Success

This session builds a solid understanding of both the teacher and student experience and key steps to take in the first few months to get started with success with Imagine Reading. Participants will dive into the content and map out units/text sets to align to instructional goals. They will observe and unpack a Power Sentence Lesson, designed to develop strong readers and critical thinkers. Action plans will be laid out with key data points and reports for teachers to monitor to ensure students are engaged and motivated to learn. Hands-on planning to support use in a variety of implementation models including hybrid, remote and in-person learning, will be mapped out.

Assessment: Galileo K-12

Getting Started with Galileo K-12

This session builds a solid understanding of both the teacher and student experience and key steps to take in the first few months to get started with success with Galileo K-12. Participants will learn how to prepare for and support online testing for students. The student testing experience will be explored including the testing platform and tools available to students. Teachers will become familiar with the Galileo Dashboard and learn about key features that will help them monitor online testing. Key data points and reports to monitor after the initial benchmark will be explored along with action steps to take to ensure a successful start.

Progress Monitoring with Galileo Forma- tive Assessments

Galileo provides a variety of formative assessment tools that teachers may utilize to monitor students' progress in learning the district's valued learning standards. Explore how Galileo's pre-made and flexible formatives can assist in identifying students' learning accomplishments and learning needs. Teachers can use formative assessments on their own or collaborate with team members to create a repository of formative assessments.
