

Cut out these cards

1. $x^2 - 6x + y^2 + 4y + 4 = 0$	$(x + 1)^2 + (y + 5)^2 = 4$
$(x + 10)^2 + (y - 9)^2 = 64$	3. $x^2 + 4x + y^2 - 8y - 16 = 0$
$x^2 + y^2 - 14y + 49 = -38 + 49$	$(x - 3)^2 + (y + 2)^2 = 9$
$x^2 + 2x + y^2 + 10y = -22$	5. $x^2 + 20x + y^2 - 18y + 117 = 0$
$x^2 + 20x + y^2 - 18y = -117$	$x^2 + 4x + 4 + y^2 - 8y + 16 = 16 + 4 + 16$
2. $x^2 + 2x + y^2 + 10y + 22 = 0$	$x^2 + y^2 - 14y = -38$
$(x - 5)^2 + (y + 4)^2 = 8$	$x^2 - 6x + y^2 + 4y = -4$
$x^2 + 4x + y^2 - 8y = 16$	$x^2 + (y - 7)^2 = 11$
$x^2 + 20x + 100 + y^2 - 18y + 81 = -117 + 100 + 81$	$x^2 + 2x + 1 + y^2 + 10y + 25 = -22 + 1 + 25$
$x^2 - 6x + 9 + y^2 + 4y + 4 = -4 + 9 + 4$	$x^2 - 10x + y^2 + 8y = -33$
6. $x^2 - 10x + y^2 + 8y + 33 = 0$	$(x + 2)^2 + (y - 4)^2 = 36$
4. $x^2 + y^2 - 14y + 38 = 0$	$x^2 - 10x + 25 + y^2 + 8y + 16 = -33 + 25 + 16$

Place the numbered cards in the numbered slots on the chart. Use the other cards to correctly complete the square and find the equation of each circle.

1.	2.
3.	4.
5.	6.

After finding the equation of each circle, list the center and radius for each.

1. Center _____
2. Center _____
3. Center _____
4. Center _____
5. Center _____
6. Center _____

- Radius _____
- Radius _____
- Radius _____
- Radius _____
- Radius _____
